

BIGHANNA[™] composter

HANNA BIN TIPPER, BIN LIFT & BINS

The Hanna Bin Tipper is designed to fit to the 10- and 20-gallon infeed hoppers on the Big Hanna Composters. Customized Bin Lifts are available for our larger sized machines.

SIZE AND TYPE OF BINS

A bin full of food waste is much heavier to move than a bin filled with mixed waste. Therefore we recommend using bins no larger than 20 gallons when food waste only will be put into them. A bins lifting edges normally vary between different brands of bins, so it is important to specify what bin will be used at the site at order so the Bin Lift can be designed to fit the specific bin.

SUPPLY OF BINS

Together with the Bin Lift, we offer bins in volumes of 13.6 and 20 gallons.

CLEANING

Food waste handling in general might cause spillage. When using bins for feeding food waste, we recommend that there is a water hose and a drain available for cleaning the bins at the installation site.

BIN TIPPER SPECIFICATION

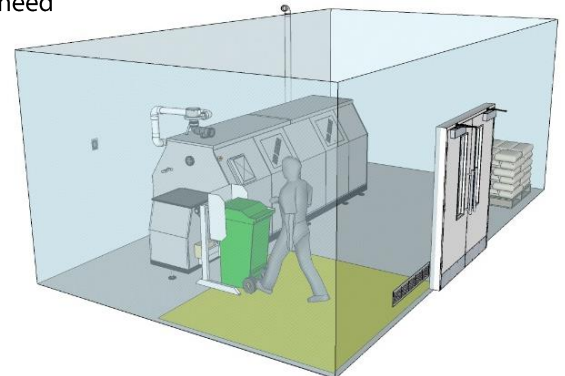

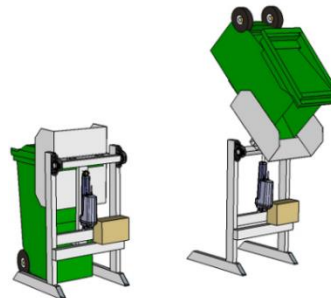

Max. load 220 lbs.
Electrical supply 208/240 V

BIN LIFT SPECIFICATION

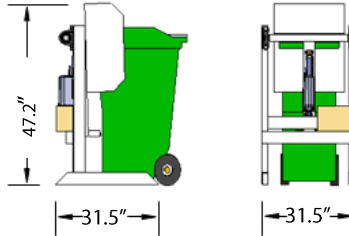

Max. load and Electrical Supply to be specified depending on choice of bin.

INSTALLATION

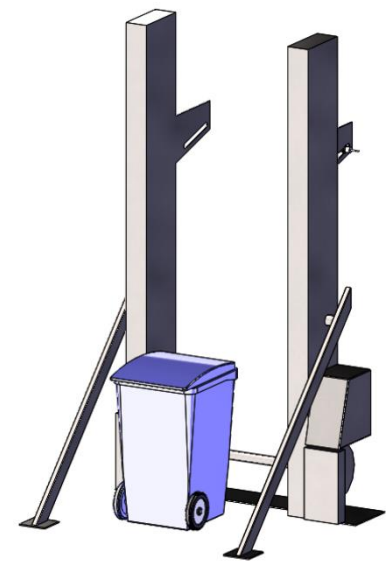

The Bin Tipper and the Bin Lift need to be anchored to the floor.
